

**NOTE:**

The Schematic Diagram printed in this bulletin is for Chassis RE-277-1 which includes a bass boost & hum reduction circuit. Chassis RE-277 differs from Chassis RE-277-1 in the following respects.

1. C38 was .02 uf. 400 V., and was connected from plate to screen of the 6V6GT tube.
2. R31, 150 K ohm 1/4 watt Resistor, was not included in the circuit and R26 connected directly to B+ 140 V.
3. R32, 120 ohm 1 watt resistor, was not included in the circuit and C35B electrolytic condenser section connected to the center tap of R27.

The two chassis are identified by the proper RE numbers on the Model Number label on the bottom of the cabinet.
